WORK EXPERIENCE

Software Engineer - Fusion 360 | July 2024 - Present

- Reduced frontend feature development time by 20% by leading frontend development of a marketing platform built with TypeScript, Next.js (React), and Tailwind CSS, implementing scalable UI systems and architectural patterns.
- Reduced incident tickets by 25% by designing and implementing first- and third-party API integrations with Redux state management, establishing reliable data flows, and maintainable frontend-backend integration patterns.
- Improved marketing funnel conversion by 20% by collaborating with product and design stakeholders in Agile sprints to define features and technical standards, translating business requirements into scalable frontend solutions.

Software Engineer - Square Agency | September 2023 - July 2024

- Improved site performance, usability, and search discoverability by building responsive websites and landing pages with Next.js and Tailwind CSS optimized for performance and SEO.
- Ensured accurate and high-quality implementation of product designs by translating Figma designs into scalable, production-ready frontend experiences.
- Improved project alignment and delivery efficiency by working closely with clients and stakeholders to iterate on feedback and refine feature scope.

Full Stack Software Engineer - Solera | October 2022 - July 2023

- Reduced onboarding drop-off rate by 12% by strengthening registration security and reliability, leading the design and development of secure APIs using Laravel (PHP) and Oracle SQL, including third-party face/ID verification integration.
- Reduced frontend incident reports by 10% by initiating and leading the development of a reusable UI toolkit using React and Redux with Storybook documentation, improving UI consistency, scalability, and delivery speed.
- Improved sprint delivery rate by 10% by partnering with UX/UI and product teams in an Agile environment to deliver registration flows, dashboards, and landing pages aligned with usability, performance, and business goals.

Junior Software Engineer - GCC Networking | April 2021 - October 2022

- Reduced client support requests by 70% by building and maintaining dashboards with React, Node.js, and MongoDB, giving clients direct access to reliable data and self-service tools.
- Boosted client satisfaction by 20% by designing user-friendly dashboards in Figma and translating them into accessible React components.

SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript, Redux, RTK Query, HTML, CSS, Tailwind CSS, Material UI, Styled Components, CMS, WordPress
- **Backend:** Node.js (Express.js), Laravel (PHP), MongoDB, SQL (MySQL, Oracle)
- **Other:** Git, Docker

EDUCATION

B.S. in Computer Science

M.S. in AI and Machine Learning

Western Governors University | 2026

Western Governors University | 2026 - 2027
